

MEDICATIONS THAT MAY AFFECT BLOOD CLOTTING

Some medications interfere with blood clotting and may affect your surgery. It is important that your surgeon be aware if you are taking any of the medications listed below. If you are taking anticoagulants such as Coumadin, Heparin, or Lovenox, please consult your primary care physician or cardiologist prior to discontinuing the medication; do not suddenly stop taking these medications. Tylenol (acetaminophen) can be taken for pain and does not affect blood clotting.
